

CLAYMORE WINDOWS LTD

A NAME YOU CAN TRUST

PVCu Windows | Doors-French Doors | Conservatories

Our Company

Claymore Windows is a local family run company based at Claverhouse Industrial Park, Dundee.

Working together with Selecta who have designed the new Advance 70 mm profile we can produce an attractive and high security quality product at a reasonable price.

The Advance 70 mm five chamber profile provides great strength and durability, while high flow drainage eradicates problems generated by adverse weather conditions. The Advance 70, as its name would suggest, greatly exceeds the highest industry requirements and will for the foreseeable future.

All our windows and doors are internally beaded and fully reinforced and have a co-extruded gasket which avoids the unsightly problem of shrinking rubber seals.

There is a full range of colours which include: White, Rosewood, Rosewood & White, Golden Oak and Golden Oak & White and come with 28mm double glazed or 40mm triple glazed units and airflow slotvents as standard.

Being members of the PLANITHERM Installer network ensures we are using high performance low-emissivity glass, incorporating the latest advancements in thermally insulating glass coating technology. The benefits are:

- **Haze and tint free windows**
- **Eliminates condensation**
- **Free solar heat gain**
- **Thermal insulation**
- **Optimal energy ratings**

PVCu Windows

Timber framed windows and doors need constant maintenance to not only look good, but to combat the effects of the weather which lead to rotting, warping and peeling paint. Only installing single glazing can increase the amount of heat and energy lost from your property, particularly if the frames are old and decaying.

In today's environment choosing PVCu replacement windows and doors means that you can have all of the aesthetic benefits of timber without the worries.

What are the benefits of PVCu?

- **Low maintenance.** No more painting, staining, sanding or filling. Just a wipe over with a damp cloth and mild detergent when necessary to remove any dirt.
- **Weather Resistant.** Come rain or shine your windows and doors will stay looking good and keep the warmth in.
- **Energy Saving.** The Selecta profiles used to make your frames offer thermal insulation, while the gaskets and weathertight seals keep out draughts and the glazing reflects the heat back into your room. You'll notice immediately how our windows and doors help keep in the heat and keep out the noise.
- **Security.** Our frames will also keep out unwelcome intruders. Reinforcements used in the Selecta Profile provide added strength backed up by high security and multi-locking hardware.
- **Safety.** Being secure should not compromise your safety and comfort. Our windows and doors provide easy exits to meet safety standards in the event of an emergency. Childproof hinges and locks can be fitted which restrict the opening and a night vent facility is available which allows air to circulate whilst the windows remain in a semi-closed position.
- **Easy to Install.** At Claymore we will fit your new windows and doors with the minimum of fuss and disruption to you and your home. Detailed measurements taken by the team ensure that your new frames fit perfectly and the installers will make sure that all debris is cleared away.

- **Attractive.** Although all our frames come in a sparkling white finish, if you prefer the look of wood you can also choose from Golden Oak or Rosewood finish. In fact PVCu is so versatile that you can have a woodgrain finish on one side and white on the other.

Casement Windows

PVCu windows are the wise choice for the direct replacement of decaying timber or bulky and dated casement windows.

Whilst the size and shape of the window will depend largely on the opening, the variety of options means that you can achieve a look on the outside of your home which is as individual as the interior.

Openings

Top and side opening windows can be used in a variety of combinations. By mixing fixed and opening panes you can alter the look of the window as well as improve the ventilation and safety exits.

Glass

Patterned, stained, leaded and Georgian are just some of the glazing options available. When choosing your glass design, it is important to consider the level of privacy you require as well as the architectural properties of your home. Toughened glass and low emissivity glass, which increases heat retention and is energy saving, increase the number of combinations offered to allow you to select a style which is both beautiful and practical.

PVCu Windows

Security

Twin Cam espangolette locking offers additional peace of mind, allowing you the option of locking the window in a slightly open position.

Colour Options

Whilst many people favour the crisp, fresh look of brilliant white window frames, sometimes a more natural look is required for example in period homes or rural properties.

We therefore offer a choice of a rich and luxurious Rosewood effect or the more rustic Golden Oak. If you can't make up your mind between white and woodgrain finish, why not have both?

You could have cool white on the inside to blend with the interior decor and a traditional Golden Oak finish on the outside to suit the exterior of your home.

Bead Options

The Bead used in the window design can subtly change the angles in the window. From a soft curve to a straight edge, we will have the bead to make your ideal window.

Handles

Whether you prefer a slimline handle in white which blends into the overall window or a leading, elegant brass handle to enhance the openings, you choose the right handle for your home.

Window Options

And the options don't stop there, you can also give your home a facelift with the addition of a Bay or Bow window, creating a feeling of space. Or you may choose the modern tilt & turn windows for a practical alternative.

Residential Doors

The entrance to your home should serve two purposes; welcome you, your family and your visitors and keep out unwelcome intruders. Choosing PVCu doors made from Selecta profiles gives you the additional benefit of keeping in heat, therefore keeping down costs.

Styles

All our doors are individually made to suit your requirements. Choose from fully glazed, depending on the level of privacy and light you require.

White, Rosewood and Golden Oak profiles and panels are available, as well as combining white on one side with a woodgrain effect on the other, to blend your door into its surroundings externally and internally.

All door profiles, including the mid rails are styled to allow for attractive sight lines from both sides. Side Panels are available to match your selected door and ensure that the entrance of your home coordinates beautifully with your windows.

Openings

Whether you require an inward or outward opening door, left or right hung or select the option of a low threshold for easy access for pushchairs and wheelchairs, you can rest assured that your new door will function perfectly.

Security

Our profiles are reinforced for added strength in high winds and to resist attack from intruders. High security multi-locking systems provide additional reassurance that the only people entering your home are those you invite in. Weathertight seals and insulated frames assist in keeping your home warm and inviting on the inside, no matter how cold and damp it is outside.

Patterns/glass

As with our extensive range of windows, the glazing options include patterned, stained, leaded and frosted. You may decide to continue the theme chosen for your windows, or perhaps you wish to create a more elaborate design for the main entrance to your home.

There are also other glass options such as fused or leaded colour and raised bevel options.

French Doors

Traditional French Doors provide a glamorous solution to letting light into your home. Whilst they are practical and convenient allowing easy access to gardens and conservatories, French Doors can be as decorative as your new windows and doors, with patterned, stained, leaded or frosted glass.

High security hinges add reassurance, keeping out intruders and protecting against the weather.

Patio Doors

Patio Doors provide a wide opening for unrestricted access and uninterrupted views. By allowing maximum light into your home, they create a spacious and light atmosphere. Use of modern operating mechanisms allow for graceful and smooth opening whilst offering security and strength when closed.

Patio Doors are available in 2, 3 or 4 pane options to give a panoramic view of your garden. The use of safety glass adds extra peace of mind. Your new patio doors are designed to insulate against draughts and noise, but fitting internal or external vents provides a safe and draught free option to allow air circulation.

Choosing French or Patio Doors is the practical and convenient way to link your home with the outdoors or to your conservatory.

Doors

You can also have your house name or number added to the glass - this is available in a variety of styles.
